MOVING LIFE FORWARD

Connecting Communities >

Grow your network and your customer base quickly, safely and efficiently

Above manages the delivery of fibre-to-the-premises (FTTP) rollouts across the United Kingdom.

Our innovative solutions cover the full scope of work, from design and build to project management and commissioning. We help you build a resilient, compliant network, secure new customers and transform communities.

What we do

We can offer a full 'turnkey' solution or specific elements to suit your requirements:

- > Surveys
- > Construction (flex and civils)
- > Streetworks, including permitting, noticing and conformance
- > PIA product management and compliance
- > Supervision and Quality Control
- > Testing and Commissioning
- > Design
- > Wayleave management
- > Materials procurement

Our supply chain is your supply chain

When you work with Above, you gain access to a wealth of sector-specific experience and the industry connections that come with it.

We're part of a large Tier 1 business and have spent the last six decades establishing long-lasting supplier relationships that cover telecoms, water and beyond.

For you, this means more cost savings and greater peace of mind. Our strengths are your strengths – and with our buying power and established national supply chain, you can expect success from day one.

Any project, any scale

Whether you're planning an urban physical infrastructure access (PIA) project or a complete rural rollout, Above has the agility and expertise to make it happen.

We transform complex projects into turnkey solutions that improve efficiency and help you deliver a better future for customers and their communities.

Bring us on board to streamline a project phase – or hand us the reins and relax. Either way, you'll enjoy end-to-end support from our team, backed by a detailed service delivery programme.

Whatever the scale, safety remains our highest priority. In 2023, we earned the RoSPA President's Award in recognition of our robust risk control strategies and impeccable safety record.

We know what makes telecoms tick

We have a team of experts who bring years of experience working across UK network providers.

We understand your goals and we have hands-on experience in tackling sector-specific challenges.

This means you can expect tailored, commercially minded advice and solutions that turn ideas into action. We draw on our experience every day, devising new ways to streamline our services and lower the cost per premises passed (CPPP).

For example, we've invested in a bespoke works management system to accelerate project delivery. With programming, scheduling and as-built data capture capabilities, it ensures your needs, targets and compliance requirements are always front of mind.

Work with us to move life forward

Above is a leading infrastructure services and engineering company that moves life forward with cutting-edge and sustainable infrastructure solutions.

We believe our work can improve people's lives, boost the economy and breathe new life into communities. If you share our vision, let's grow together.

- > More than 60 years of experience in telecommunications and wider utilities
- > We treat customers as true partners, working together to build expertise and grow
- > We thrive on transparency, accountability and safety
- > We're constantly looking for new ways to add value and unlock opportunities for you

Are you working towards Path to Collaboration status?

Above is a proven partner to support you in achieving and maintaining Path to Collaboration (PTC) status. We've worked extensively with Openreach to ensure compliance with PIA requirements as part of our service delivery.
